

These schematics cover the missing pages in the original ones published by the maker. Signal names existing in the original pages have been preserved. New signal names try to follow the maker style or are taken from similar schematics of the same maker.

The schematic shows a complex circuit for the Jotego board. Key components include:

- Power Supply:** A 12V regulator (U1) with a 0.1uF capacitor (C1) and a 100k resistor (R1).
- Microcontroller:** KONAMI 051550, connected to various pins for power, ground, and signals.
- Decoders:** Multiple 74LS253 and 74LS257 decoders used for address and data bus expansion.
- Logic:** Various logic gates (74LS04, 74LS00) and flip-flops (74LS174) for signal processing.
- Inputs/Outputs:** A Jamma connector (JM1) for game controls, a speaker output, and various status LEDs.
- Connectors:** SW1, SW2, SW3, SW_DIP_x08, and various pin headers.

The board is labeled 'JOTEGO' and 'KONAMI PWB351392A GX808'. The schematic is a detailed representation of the board's internal wiring and component placement.
